

WHY STOOL TEST MY PET?

Intestinal Parasites Like Worms Are A Crucial Health Concern For Dogs And Cats

Symptoms may include abnormal stools (like diarrhea), vomiting, changes in appetite or weight, scooting and more.

Many pets spread parasites in their stools without showing any signs at all!

80% of dog owners know that intestinal parasites like worms are a significant health issue for dogs.*

50% of dog owners have a stool (fecal) test performed by their vet at least annually.* Great job!

65% of pet owners are aware that intestinal parasites like worms can also be a health concern for people.*

Symptoms range from digestive upset to serious damage to eyes or internal organs.

Veterinarians advise testing normal-appearing stools twice per year and whenever stools look abnormal (soft, loose, bloody, etc.).

52% of pet owners would prefer to collect and mail the stool sample from home.* ClueJay makes it easy!
